

Mitel MiCollab

Keeping employees connected and productive
– anytime, anywhere, on any device

Key Features

- UC clients for desktop, mobile devices and web
- Rich, real-time presence information
- Dynamic call routing
- Collaborative experience with desktop & document sharing
- Simplified voice message retrieval
- Secure Instant Messaging (IM) with file transfer

Optimized for the mobile workforce, MiCollab enables access to secure and reliable collaboration and messaging tools, providing a consistent collaboration experience from any device – regardless of location.

MiCollab provides the essential mix of tools that helps connect employees together from anywhere, on any device, at any time allowing for spontaneous or planned communications and collaborations. Whether it is instant messaging, voice, desktop video, or web collaboration, employees are able to choose the method that works best given the reasons for meeting, the people involved, and their current location.

MiCollab's web-based management console provides a single view of the entire solution that can be accessed from anywhere or through integration with Active Directory.

MiCollab supports a range of deployment options including software only for deployment on industry standard servers, as a virtual machine on VMware® vSphere® or Hyper-V, and as software pre-integrated on a business-class, rack-mounted server¹.

When deployed within a VMware environment MiCollab can be managed through VMware vCenter™ management tools, providing resource efficiencies and a single business continuity plan across all of your business applications.

MiCollab integrates with and provides enhanced communications and collaboration functionality to leading business applications, including Microsoft Outlook, Google Mail and IBM Lotus Notes.

Technical specifications
